Abstract of EP0926468

The device has at least one display unit (22,23) with a pointer (2) driven by a measuring mechanism (1), for analogue display of the measured value in co-operation with fixed scale markings (3) and variable scale information (5), provided within an area defined by the scale markings by a display (4) within the area covered by the pointer movement. The display may be a dot matrix display or a liquid crystal display cell.
